

***Mixed-Stock Fisheries
(Tabled by the Russian Federation)***

Atlantic salmon mixed-stock fisheries in the Russian Federation are conducted in Murmansk and Arkhangelsk regions in the White Sea only. The brief description of MSF is given in the North-East Atlantic Commission document [NEA\(20\)11](#) in 2020. There were no changes in MSF since then. There was no impact of the coronavirus (COVID-19) pandemic to MSF in 2020.

In 2019 and 2020 total declared catches of Atlantic salmon taken in MSF in coastal areas of the White Sea were 21.7 and 16.4 t, respectively (Table).

Table. Nominal catches of Atlantic salmon in Russia in 2019-2020 (in tonnes round fresh weight).

	In-river	Estuarine	Coastal	Total
Provisional nominal catch (which may be subject to revision) for 2020	32.4	0.0	16.4	48.8
Confirmed nominal catch of salmon for 2019	35.3	0.0	21.7	57.0
