

CNL(23)11rev\*

*Request for Scientific Advice from ICES*

- 1. With respect to Atlantic salmon in the North Atlantic area:**
  - 1.1 provide an overview of salmon catches and landings by country, including unreported catches and catch and release, and production of farmed and ranched Atlantic salmon in 2023<sup>1</sup>;
  - 1.2 report on significant new or emerging threats to, or opportunities for, salmon conservation and management<sup>2</sup>;
  - 1.3 provide a compilation of tag releases by country in 2023; and
  - 1.4 identify relevant data deficiencies, monitoring needs and research requirements.
- 2. With respect to Atlantic salmon in the North-East Atlantic Commission area:**
  - 2.1 describe the key events of the 2023 fisheries<sup>3</sup>;
  - 2.2 review and report on the development of age-specific stock conservation limits, including updating the time-series of the number of river stocks with established CLs by jurisdiction;
  - 2.3 describe the status of the stocks, including updating the time-series of trends in the number of river stocks meeting CLs by jurisdiction; and
  - 2.4 provide catch options or alternative management advice for the 2024 / 2025 – 2026 / 2027 fishing seasons, with an assessment of risks relative to the objective of exceeding stock conservation limits, or pre-defined NASCO Management Objectives, and advise on the implications of these options for stock rebuilding<sup>4</sup>.
- 3. With respect to Atlantic salmon in the North American Commission area:**
  - 3.1 describe the key events of the 2023 fisheries (including the fishery at St Pierre and Miquelon)<sup>3</sup>;
  - 3.2 update age-specific stock conservation limits based on new information as available, including updating the time-series of the number of river stocks with established CLs by jurisdiction;
  - 3.3 describe the status of the stocks, including updating the time-series of trends in the number of river stocks meeting CLs by jurisdiction; and
  - 3.4 provide catch options or alternative management advice for 2024-2027 with an assessment of risks relative to the objective of exceeding stock conservation limits, or pre-defined NASCO Management Objectives, and advise on the implications of these options for stock rebuilding<sup>4</sup>.

\*Grammatical errors corrected 15 June 2023

**4. With respect to Atlantic salmon in the West Greenland Commission area:**

- 4.1 describe the key events of the 2023 fisheries<sup>3</sup>;
- 4.2 describe the status of the stocks<sup>5</sup>; and
- 4.3 provide catch options or alternative management advice for 2024-2026 with an assessment of risk relative to the objective of exceeding stock conservation limits, or pre-defined NASCO Management Objectives, and advise on the implications of these options for stock rebuilding<sup>4</sup>

**Notes:**

1. *With regard to question 1.1, for the estimates of unreported catch the information provided should, where possible, indicate the location of the unreported catch in the following categories: in-river; estuarine; and coastal. Numbers of salmon caught and released in recreational fisheries should be provided.*
2. *With regard to question 1.2, ICES is requested to include reports on any significant advances in understanding of the biology of Atlantic salmon that is pertinent to NASCO.*
3. *In the responses to questions 2.1, 3.1 and 4.1, ICES is asked to provide details of catch, gear, effort, composition and origin of the catch and rates of exploitation. For homewater fisheries, the information provided should indicate the location of the catch in the following categories: in-river; estuarine; and coastal. Information on any other sources of fishing mortality for salmon is also requested. For 4.1, if any new surveys are conducted and reported to ICES, ICES should review the results and advise on the appropriateness of incorporating resulting estimates into the assessment process.*
4. *In response to question 2.4, 3.4 and 4.3, provide a detailed explanation and critical examination of any changes to the models used to provide catch advice and report on any developments in relation to incorporating environmental variables in these models. Also provide a detailed explanation and critical examination of any concerns with salmon data collected in 2023 which may affect the catch advice considering the restrictions on data collection programmes and fisheries due to the COVID 19 pandemic.*
5. *In response to question 4.2, ICES is requested to provide a brief summary of the status of North American and North-East Atlantic salmon stocks. The detailed information on the status of these stocks should be provided in response to questions 2.3 and 3.3.*

**Attendees:**

Sergey Prusov (NEAC, manager representative)

Peder Fiske (NEAC, scientist representative)

Dale Marsden (NAC, manager representative)

Tim Sheehan (NAC, scientist representative)

Rebekka Jensen (WGC, manager representative)

Niall Ó Maoiléidigh (WGC, scientist representative)

Martha Robertson / Alan Walker (ICES representative, Observer)

Livia Goodbrand (Co-ordinator)
