

Mixed-Stock Fisheries
(Tabled by the Russian Federation)

In 2023, Atlantic salmon mixed-stock fisheries (MSF) continued only in certain coastal areas of the White Sea. Fisheries targeting Atlantic salmon in the Barents Sea was banned in late 1950s. The brief description of MSF was provided in the North-East Atlantic Commission document NEA(20)11 in 2020. Recently there have been no changes or developments in MSF management.

In 2022 and 2023 total declared catches of Atlantic salmon taken in MSF in coastal areas of the White Sea were 19.14 and 16.55 t, respectively (Table).

Table. Nominal catches of Atlantic salmon in Russia in 2022-2023 (in tonnes round fresh weight).

	In-river	Estuarine	Coastal	Total
Provisional nominal catch (which may be subject to revision) for 2023	35.38	0.0	16.55	51.93
Confirmed nominal catch of salmon for 2022	36.24	0.0	19.14	55.38
