# *Mixed-Stock Fisheries (Tabled by Norway)*

In most fjord regions and in all coastal regions, mixed-stock fisheries are not permitted due to low numbers of adult salmon returns and/or high probability of overexploitation of one or more stocks. As a result of regulatory measures mixed stock fisheries are closed in 35 out of 47 regions. In 2025 bag net fisheries was prohibited in the coastal region and in the eastern fjords in Finnmark County. In the two remaining fjord regions in Finnmark, season length was reduced from 10 to four weeks. Season length were also reduced in in three fjord regions in central/western parts of Norway. From 2025, mixed stock fisheries are closed in all coastal regions.

In the remaining mixed stock fisheries, only bag nets and rod and line are allowed. In addition to restrictions on fishing gear, regulatory measures are length of fishing season and number of fishing days per week.

In 2025, 215 fishermen participated in mixed-stock fisheries. This is a 19 percent decrease compared to the year before, and a 78 percent decrease compared to the year prior to the latest major revision of regulatory measures (2020). 280 bag nets were used. The total catch of Atlantic salmon was 70 tons, a 7 percent decrease from the previous year and a 77 percent decrease from 2020. A total catch of 2.1 tons of seatrout and 22 kg anadromous arctic char were reported in 2025.

In 2025, mixed stock fisheries were most extensive in Trøndelag County, representing 34 percent of the fishermen, 38 percent of total gear and 62 percent of the total catch.

No in-season measures were introduced in mixed stock fisheries in 2025.
